Abstract

The present study examines the level of awareness of e-resources among the faculty members of government aided arts and science colleges in Thoothukudi District, Tamil Nadu. A structured questionnaire was used to collect data from 782 faculty members drawn from nine government aided arts and science colleges. Of these, 568 (72.6%) were assistant professors and 214 (27.4%) were associate professors. By gender, 579 (74.0%) were female and 203 (26.0%) were male. The collected data were analysed using percentage analysis. This study examines the overall awareness on e-resources among faculty members, 782 responses, 55.1% were in the "aware" category, 37.0% in "highly aware" and 7.9% in "somewhat aware". This study also explores the sources used by the faculties for awareness on digital resources initiatives and the result was orientation/training programmes were the leading source of awareness (26.11%), followed by colleagues (17.43%) and library staff (16.58%). Internet search (10.80%), publishers (10.37%) and self-exploration (10.20%) were cited by about one-tenth of the responses each, and social media was the least cited source (8.50%). The chi-square tool was used for analyzing the data. The study concludes that and recommends [orientation programmes, user training, and better promotion of e-resources by college libraries to improve their effective use among the faculty.

Keywords: E-resources, Awareness, Faculty members, Government aided colleges, Arts and Science colleges, Thoothukudi District

1. Introduction

The rapid growth of information and communication technology has changed the way academic libraries acquire, organise and deliver information. Print collections are now supported, and in many cases replaced, by electronic resources such as e-journals, e-books, bibliographic and full-text databases, e-theses and open educational resources. For college faculty, these resources are important tools for teaching, curriculum development, research and professional growth. In India, national initiatives such as N-LIST, e-ShodhSindhu, SWAYAM, the National Digital Library of India and Shodhganga have widened access to scholarly content for colleges, including government aided institutions. Awareness is the first step towards using these resources: faculty who do not know what is available, how to reach it or what it offers cannot use it effectively. The present study examines the awareness of e-resources among faculty members of government aided arts and science colleges in Thoothukudi District.

2. Need for the Study

Government aided arts and science colleges form a large part of higher education in Tamil Nadu, and their faculty carry heavy teaching and administrative loads with limited institutional resources. Large sums are spent each year by the government, the UGC and consortia such as INFLIBNET to provide e-resources to colleges. The return on that investment depends on whether the faculty know about these resources and how to use them. Accreditation bodies such as NAAC and the NIRF framework also place weight on the use of ICT and digital resources in teaching and research.

Several studies have examined e-resource awareness in universities and professional colleges, but studies focusing on government aided arts and science colleges in Thoothukudi District are scarce. Without reliable data on the level of awareness, libraries cannot plan orientation programmes, subscription decisions or training. This study is needed to fill that gap and to give college librarians, administrators and policy makers an evidence base for improving awareness and use.

3. Statement of the Problem

Colleges now have access to a wide range of e-resources through institutional subscriptions, consortia and open-access platforms. However, many faculty members may not be fully aware of what is available, how to access it, or how to use it for teaching and research. Gaps in awareness lead to under-use of resources the institutions have already paid for, and faculty then depend on traditional print sources or unreliable free web content. In government aided arts and science colleges in

Thoothukudi District, the level of awareness of e-resources among faculty, the sources through which they learn about them, and the factors that limit their awareness have not been systematically studied. The present study, "Awareness on E-Resources by the Faculties of Government Aided Arts and Science Colleges in Thoothukudi District", addresses this problem.

4. Review of Literature

Rajangam C (2012) made a study on electronic resources used by the faculties of Colleges affiliated to Bharathidasan University. A survey of 120 faculty members was conducted through a questionnaire. The analysis of the collected data covers the use of electronic information resources and how the electronic resources are improving the academic carrier of the faculty and also what are the problems are faced in using the electronic resources. It concludes that the main intention of the use of electronic resources has been the academic interest of the users. Ch.Srinivasa Rao and Sivaraman P (2025) made a study on user perception and opinion on Engineering College students in Telengana State and found that 34.69% of the respondents are using their libraries less than one hour due to technological development of libraries like remote access and so on. The study explores majority of the Respondents 32.57% using their library for the purpose of preparing their examination and 32.1% of the respondents opined their library is comfortable environment when they are studying. Natarajan, Suresh, Sivaraman and Sevukan (2010) studied the use and user perception of electronic resources at Annamalai University. They found that e-resources were used very rarely, even though the university had plenty of them, mainly because of lack of awareness, lack of time and limited subject coverage. This is close to your own finding that awareness of specific databases and drug resources needs to be raised through user orientation and training. Patil, Gadge and Chikate, 2020). A questionnaire survey received 297 returns from 500 distributed. It found that most faculty sought information to update their knowledge and to prepare lectures, and mostly consulted colleagues. For research, books and monographs were used most, both print and electronic sources were considered useful, and the main problem was that information is too vast.

5. Objectives of the Study

1. To find the overall level of awareness of e-resources among the faculty members.
2. To identify the sources through which faculty members become aware of e-resources.
3. To assess awareness of specific types of e-resources and national initiatives.
4. To compare awareness levels by gender and designation.
5. To identify the problems faced by faculty members and suggest measures for improvement.

6. Methodology

6.1 Research design. The survey method was adopted, with a structured questionnaire as the data collection tool. The questionnaire covered. demographic profile, awareness of e-resources, sources of awareness, problems faced.

6.2 Population and sampling method.

The population comprises faculty members of Arts and Science colleges in Thoothukudi District. Nine colleges were selected for the study which are government aided colleges and affiliated to Manonmaniam Sundaranar University. The cluster sampling technique was adopted for this study. A total of 809 questionnaires were distributed to the faculty members, of which 782 duly filled-in questionnaires were received, giving an overall response rate of 96.66%.

The population consisted of all faculty members of the government aided arts and science colleges in Thoothukudi District, [total population, e.g. N = ___ faculty members in ___ colleges]. Nine colleges were selected for the study. [Describe the technique, for example: "Stratified proportionate random sampling was used, with colleges and designation as strata" / "Simple random sampling was used" / "Convenience sampling was used" / "A census of the faculty in the selected colleges was taken."] Questionnaires were distributed to [number] faculty members, and [number] duly filled questionnaires were received, giving a response rate of [__]%. After scrutiny, a final sample of 782 respondents was used for analysis, comprising 568 assistant professors and 214 associate professors, of whom 203 were male and 579 were female.

7. Data Analysis and Interpretation

Table 7.1 Gender wise distribution of Respondents in Arts and Science Colleges at Thoothukudi District.

S.No.	Name of the College	Male	Female	Total
1	V.O. Chidambaram College	60 (45.80)	71 (54.20)	131 (16.75)
2	St. Mary's College	0 (0.00)	135 (100.00)	135 (17.26)
3	Kamaraj College	15 (33.33)	30 (66.67)	45 (5.75)
4	A.P.C. Mahalaxmi College for Women	4 (3.15)	123 (96.85)	127 (16.24)
5	Holy Cross Home Science College	4 (7.14)	52 (92.86)	56 (7.16)
6	Aditanar College of Arts and Science	38 (62.30)	23 (37.70)	61 (7.80)

7	G. Venkataswamy Naidu College	31 (31.63)	67 (68.37)	98 (12.53)
8	Pope's College	32 (35.56)	58 (64.44)	90 (11.51)
9	Sri K.G.S. Arts College	19 (48.72)	20 (51.28)	39 (4.99)
	Total	**203 (25.96)**	**579 (74.04)**	**782 (100.00)**

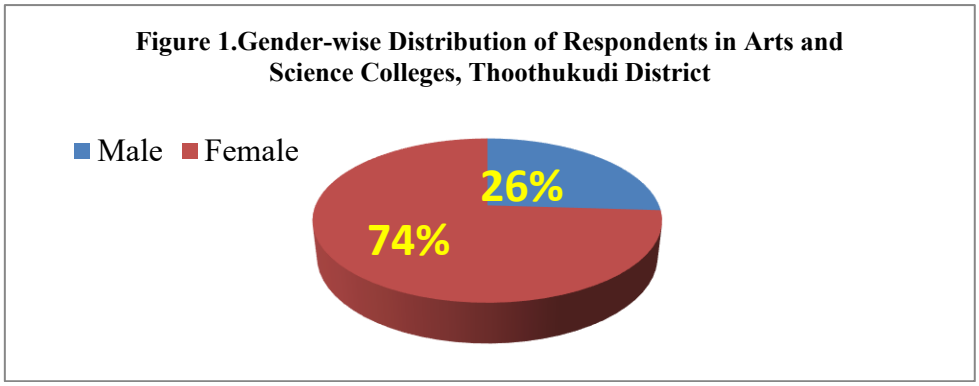

Figure 1.Gender-wise Distribution of Respondents in Arts and Science Colleges, Thoothukudi District

7.1. Gender-wise Distribution of Respondents in Arts and Science Colleges, Thoothukudi District

Table 7.1 shows the gender-wise distribution of the 782 faculty respondents drawn from nine arts and science colleges in Thoothukudi district. Of these, 579 (74.04%) are female and 203 (25.96%) are male. Female respondents thus outnumber male respondents by roughly three to one (about 2.85 females for every male). This largely reflects the presence of women's institutions in the sample and the higher proportion of women among faculty in the colleges studied.

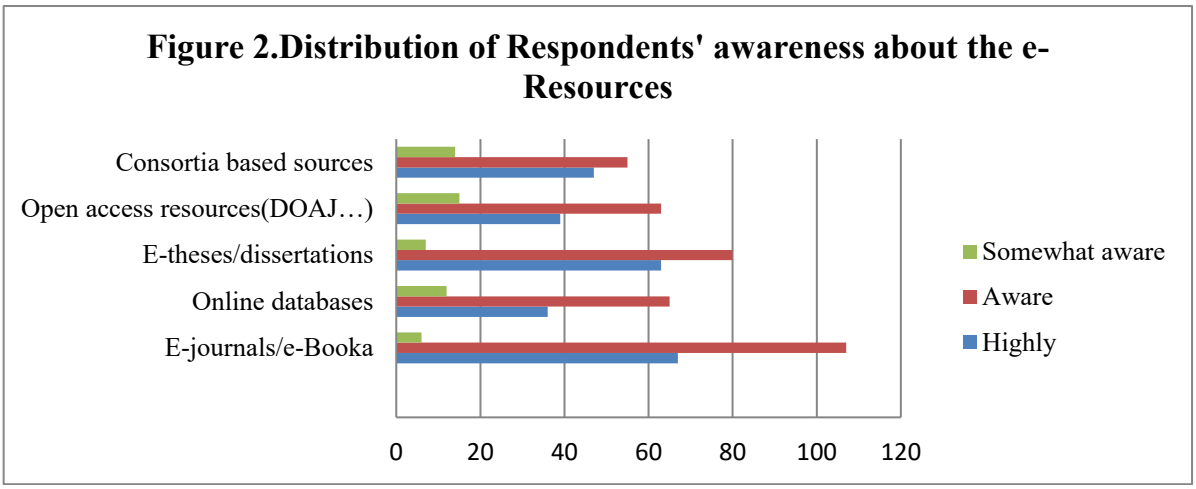
Gender composition within colleges, all respondents from St. Mary's College (100%) are female, and A.P.C. Mahalaxmi College for Women (96.85%) and Holy Cross Home Science College (92.86%) are also overwhelmingly female. This is consistent with the fact that these are women's institutions, where the few male respondents (4 each) are likely visiting or male teaching staff. In G. Venkataswamy Naidu College (68.37%), Kamaraj College (66.67%) and Pope's College (64.44%), female respondents form about two-thirds of the group. V.O. Chidambaram College (54.20% female) and Sri K.G.S. Arts College (51.28% female) show an almost balanced gender distribution. Aditanar College of Arts and Science is the only college where male respondents (62.30%) outnumber female respondents (37.70%).

Share of each gender across colleges. Among the 203 male respondents, the largest proportion come from V.O. Chidambaram College (29.56%), followed by Aditanar College (18.72%), Pope's College (15.76%) and G. Venkataswamy Naidu College (15.27%). Among the 579 female respondents, the largest proportions come from St. Mary's College (23.32%) and A.P.C. Mahalaxmi College for Women (21.24%), followed by V.O. Chidambaram College (12.26%) and G. Venkataswamy Naidu College (11.57%).

It is concluded that the sample is predominantly female (74.04%), and it is strongly influenced by the women's colleges. This gender profile should be kept in mind when interpreting the later findings on digital information use patterns, since any gender-based differences in information-seeking behaviour will be drawn mainly from a female-majority group.

Table7. 2.Distribution of Respondents' awareness about the e-Resources

S.No.	E-resource	Highly aware	Aware	Somewhat aware	Total
1	E-journals / e-books	67 (37.2%)	107 (59.4%)	6 (3.3%)	180 (100%)
2	Online databases	36 (31.9%)	65 (57.5%)	12 (10.6%)	113 (100%)
3	E-theses / dissertations	63 (42.0%)	80 (53.3%)	7 (4.7%)	150 (100%)
4	Open access resources (DOAJ…)	39 (33.3%)	63 (53.8%)	15 (12.8%)	117 (100%)
5	Consortia-based sources	47 (40.5%)	55 (47.4%)	14 (12.1%)	116 (100%)
6	Multimedia resources	37 (34.9%)	61 (57.5%)	8 (7.5%)	106 (100%)
	Total	**289 (37.0%)**	**431 (55.1%)**	**62 (7.9%)**	**782 (100%)**



7.2.Distribution of Respondents' awareness about the e-Resources

Table7.2 shows the respondents' level of awareness of different categories of e-resources. Of the 782 responses, 431 (55.1%) fell in the "aware" category, 289 (37.0%) in "highly aware", and only 62 (7.9%) in "somewhat aware". Together, 92.1% of responses indicated awareness at the "aware" or "highly aware" level, which shows a generally good awareness of e-resources among the respondents.

Awareness was highest for e-theses/dissertations, where 42.0% of respondents were highly aware, followed by consortia-based sources (40.5%) and e-journals/e-books (37.2%). Multimedia resources (34.9%), open access resources (33.3%) and online databases (31.9%) recorded lower levels of high awareness.

When the "highly aware" and "aware" categories are combined, e-journals/e-books rank first (96.7%), followed by e-theses/dissertations (95.3%), multimedia resources (92.5%) and online databases (89.4%). Consortia-based sources (87.9%) and open access resources (87.2%) rank lowest.

The "somewhat aware" category was largest for open access resources (12.8%), consortia-based sources (12.1%) and online databases (10.6%). This suggests that these resources need more attention through user orientation, information literacy programmes and training on their effective use. By contrast, only 3.3% were somewhat aware of e-journals/e-books, which shows that these are the most familiar resources.

Table 7.3. College wise distribution of Respondents about the awareness on e- resources.

S.No.	Name of the College	Highly aware	Aware	Somewhat aware	Total
1	V.O. Chidambaram College	51 (38.9%)	72 (55.0%)	8 (6.1%)	131 (100%)
2	St. Mary's College	49 (36.3%)	81 (60.0%)	5 (3.7%)	135 (100%)
3	Kamaraj College	5 (11.1%)	32 (71.1%)	8 (17.8%)	45 (100%)
4	A.P.C. Mahalaxmi College for Women	42 (33.1%)	76 (59.8%)	9 (7.1%)	127 (100%)
5	Holy Cross Home Science College	12 (21.4%)	39 (69.6%)	5 (8.9%)	56 (100%)
6	Aditanar College of Arts and Science	15 (24.6%)	41 (67.2%)	5 (8.2%)	61 (100%)
7	G. Venkataswamy Naidu College	55 (56.1%)	36 (36.7%)	7 (7.1%)	98 (100%)
8	Pope's College	43 (47.8%)	41 (45.6%)	6 (6.7%)	90 (100%)
9	Sri K.G.S. Arts College	17 (43.6%)	13 (33.3%)	9 (23.1%)	39 (100%)
	Total	**289 (37.0%)**	**431 (55.1%)**	**62 (7.9%)**	**782 (100%)**

7.3. College wise distribution of Respondents about the awareness on e- resources.

Table 7.3 presents the level of awareness of e-resources among faculty in the nine selected colleges. Of the 782 responses, 55.1% were in the "aware" category, 37.0% in "highly aware" and 7.9% in "somewhat aware". Overall, 92.1% of the responses fell in the "highly aware" or "aware" categories, which shows a good level of awareness.

Highly aware. The highest share was in G. Venkataswamy Naidu College (56.1%), followed by Pope's College (47.8%) and Sri K.G.S. Arts College (43.6%). V.O. Chidambaram College (38.9%) and St. Mary's College (36.3%) were close to the overall average

of 37.0%. The lowest shares were in Kamaraj College (11.1%) and Holy Cross Home Science College (21.4%).

Aware. Kamaraj College (71.1%), Holy Cross Home Science College (69.6%) and Aditanar College of Arts and Science (67.2%) had the highest shares. This shows that most respondents in these colleges have a working awareness, but fewer have reached the "highly aware" level. Somewhat aware. Sri K.G.S. Arts College (23.1%) and Kamaraj College (17.8%) recorded the highest shares, well above the overall 7.9%. These two colleges need awareness programmes, user orientation and training. St. Mary's College had the lowest share (3.7%).

It is concluded from the table combined the both highly aware and aware responses occupied by St. Mary's College ranks first (96.3%), followed by V.O. Chidambaram College (93.9%), Pope's College (93.3%), A.P.C. Mahalaxmi College and G. Venkataswamy Naidu College (92.9% each), Aditanar College (91.8%) and Holy Cross Home Science College (91.1%). Kamaraj College (82.2%) and Sri K.G.S. Arts College (76.9%) rank lowest

Table 7.4. Chi square test for awareness on e-resources among the college wise respondents

College	Awareness level	O	E	O − E	(O − E)²	(O − E)² / E
V.O. Chidambaram	Highly aware	51	48.41	2.59	6.69	0.138
V.O. Chidambaram	Aware	72	72.20	−0.20	0.04	0.001
V.O. Chidambaram	Somewhat aware	8	10.39	−2.39	5.69	0.548
St. Mary's	Highly aware	49	49.89	−0.89	0.79	0.016
St. Mary's	Aware	81	74.41	6.59	43.49	0.584
St. Mary's	Somewhat aware	5	10.70	−5.70	32.53	3.039
Kamaraj	Highly aware	5	16.63	−11.63	135.27	8.134
Kamaraj	Aware	32	24.80	7.20	51.81	2.089
Kamaraj	Somewhat aware	8	3.57	4.43	19.64	5.506
A.P.C. Mahalaxmi	Highly aware	42	46.93	−4.93	24.35	0.519
A.P.C. Mahalaxmi	Aware	76	70.00	6.00	36.05	0.515
A.P.C. Mahalaxmi	Somewhat aware	9	10.07	−1.07	1.14	0.114
Holy Cross	Highly aware	12	20.70	−8.70	75.61	3.654
Holy Cross	Aware	39	30.86	8.14	66.19	2.144
Holy Cross	Somewhat aware	5	4.44	0.56	0.31	0.071
Aditanar	Highly aware	15	22.54	−7.54	56.90	2.524
Aditanar	Aware	41	33.62	7.38	54.46	1.620
Aditanar	Somewhat aware	5	4.84	0.16	0.03	0.006
G. Venkataswamy Naidu	Highly aware	55	36.22	18.78	352.79	9.741
G. Venkataswamy Naidu	Aware	36	54.01	−18.01	324.46	6.007
G. Venkataswamy Naidu	Somewhat aware	7	7.77	−0.77	0.59	0.076
Pope's	Highly aware	43	33.26	9.74	94.85	2.852
Pope's	Aware	41	49.60	−8.60	74.02	1.492
Pope's	Somewhat aware	6	7.14	−1.14	1.29	0.181
Sri K.G.S.	Highly aware	17	14.41	2.59	6.69	0.464
Sri K.G.S.	Aware	13	21.49	−8.49	72.16	3.357
Sri K.G.S.	Somewhat aware	9	3.09	5.91	34.90	11.288
Total		**782**	**782**	**0**		**$\chi^2 = 66.68$**

Hypothesis

- **Null hypothesis (H_0):** There is no significant difference among the college wise respondents about the awareness on e-resources.

If the null hypothesis is true (all colleges are alike), every college should show the **same percentage** in each awareness level as the overall total. So E is the number of respondents we would expect in a cell if there were no difference among colleges.

Chi-Square Test: Awareness of E-Resources by College-wise Respondents

O is observed Value

E = (Row total × Column total) / Grand total

Row total: total respondents of that college

Column total: total respondents in that awareness level (all colleges together)

Grand total: 782

Degrees of freedom (df) = (r − 1)(c − 1) = (9 − 1)(3 − 1) = 16

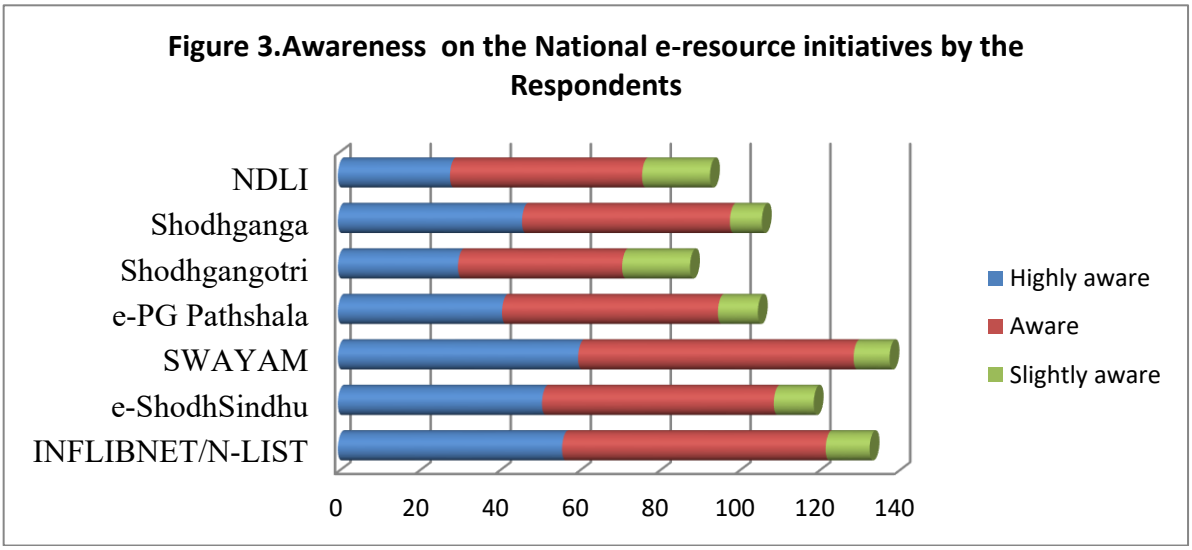
Formula is $\chi^2 = \Sigma (O - E)^2 / E$

Calculated χ^2	df	Table value (5%)	p-value	Decision
66.68	16	26.30	< 0.001	H_0 rejected

The chi-square test gave(Calculated Value) $\chi^2 = 66.680$. The table value is 26.30 at 16 degrees of freedom, with $p < 0.001$. This is below 0.05, so the null hypothesis is rejected. There is a statistically significant association between the college and the level of awareness of e-resources.

Table 7.5 Awareness on the National e-resource initiatives by the Respondents

S.No.	Initiative	Highly aware	Aware	Slightly aware	Total
1	INFLIBNET / N-LIST	56 (42.11)	66 (49.62)	11 (8.27)	133 (100)
2	e-ShodhSindhu	51 (42.86)	58 (48.74)	10 (8.40)	119 (100)
3	SWAYAM	60 (43.48)	69 (50.00)	9 (6.52)	138 (100)
4	e-PG Pathshala	41 (39.05)	54 (51.43)	10 (9.52)	105 (100)
5	Shodhgangotri	30 (34.09)	41 (46.59)	17 (19.32)	88 (100)
6	Shodhganga	46 (43.40)	52 (49.06)	8 (7.55)	106 (100)
7	NDLI	28 (30.11)	48 (51.61)	17 (18.28)	93 (100)
	Total	**312 (39.90)**	**388 (49.62)**	**82 (10.49)**	**782 (100)**



5. Awareness on the National e-resource initiatives by the Respondents

Table 7.5 shows the awareness of teaching faculty on national e-resources initiatives. Of the 782 responses, 312 (39.90%) were highly aware, 388 (49.62%) were aware, and 82 (10.49%) were slightly aware. Taken together, 89.51% of the responses fall in the highly aware and aware categories, which indicates a good overall level of awareness of these initiatives.

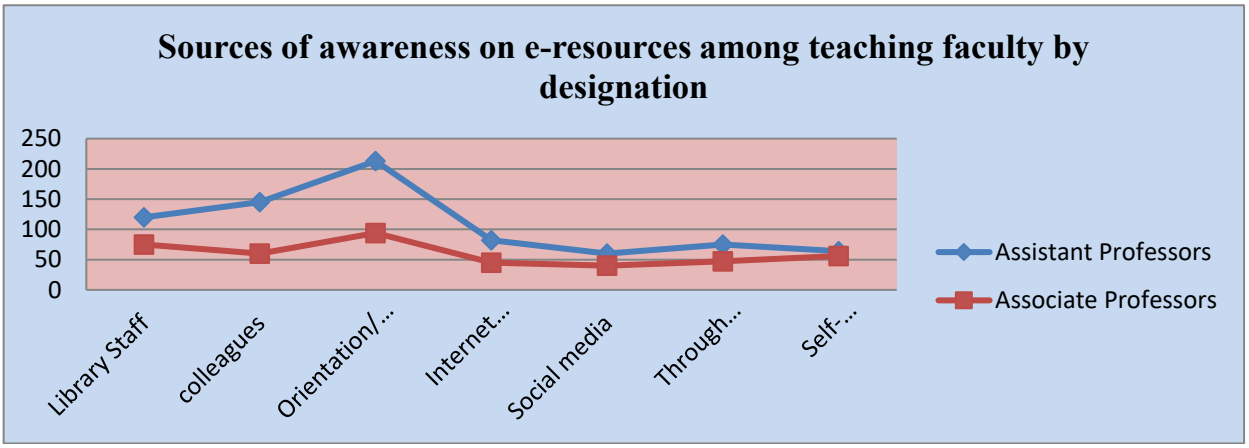
Awareness was highest for SWAYAM, where 93.48% of respondents were highly aware or aware (43.48% highly aware and 50.00% aware). Shodhganga (92.45%), INFLIBNET/N-LIST (91.73%), e-ShodhSindhu (91.60%) and e-PG Pathshala (90.48%) follow closely, each with more than 90% of respondents at these two levels.

Awareness was comparatively lower for NDLI (81.72%) and Shodhgangotri (80.68%). Shodhgangotri had the lowest share of highly aware respondents among the Shodhganga-family and portal initiatives except NDLI (34.09%), and 19.32% were only slightly aware. NDLI had the lowest share of highly aware respondents (30.11%), with 18.28% slightly aware.

It can be concluded that the faculty members are well aware of widely used initiatives such as SWAYAM, Shodhganga and INFLIBNET/N-LIST, whereas awareness of NDLI and Shodhgangotri is lower. Orientation programmes, workshops and user education by libraries would help improve awareness of these two initiatives.

Table 7.6 Sources of awareness on e-resources among teaching faculty by designation (multiple choice)

S.No.	Source	Assistant Professors	Associate Professors	Total
1	Library staff	120 (15.81)	75 (17.99)	195 (16.58)
2	Colleagues	145 (19.10)	60 (14.39)	205 (17.43)
3	Orientation / training programmes	213 (28.06)	94 (22.54)	307 (26.11)
4	Internet search	82 (10.80)	45 (10.79)	127 (10.80)
5	Social media	60 (7.91)	40 (9.59)	100 (8.50)
6	Through publishers	75 (9.88)	47 (11.27)	122 (10.37)
7	Self-exploration	64 (8.43)	56 (13.43)	120 (10.20)
	Total	**759 (100.00)**	**417 (100.00)**	**1176 (100.00)**



7.6 Sources of awareness on e-resources among teaching faculty by designation

Table7.6 shows the sources through which the respondents became aware of e-resources. Of the 1176 responses, 759 (64.54%) came from Assistant Professors and 417 (35.46%) from Associate Professors. From the table orientation/training programmes were the leading source of awareness (26.11%), followed by colleagues (17.43%) and library staff (16.58%). Internet search (10.80%), publishers (10.37%) and self-exploration (10.20%) were cited by about one-tenth of the responses each, and social media was the least cited source (8.50%).

Among Assistant Professors, orientation/training programmes ranked first (28.06%), followed by colleagues (19.10%) and library staff (15.81%). Social media (7.91%) and self-exploration (8.43%) were the least cited sources. Among Associate Professors, orientation/training programmes also ranked first (22.54%), but library staff came second (17.99%), ahead of colleagues (14.39%) and self-exploration (13.43%).

The two groups differ most in three sources. Assistant Professors depended more on colleagues (19.10% against 14.39%) and on orientation/training programmes (28.06% against 22.54%). Associate Professors relied more on self-exploration (13.43% against 8.43%) and library staff (17.99% against 15.81%). Internet search was almost identical in both groups (10.80% and 10.79%).

It can be concluded that formal orientation and training programmes are the most effective channel of awareness among the faculty members, followed by peer interaction with colleagues and the support of library staff. Libraries should therefore continue to organize regular orientation programmes and user education for both Assistant and Associate Professors, and encourage more faculty to explore e-resources on their own.

8. Major Findings

It is concluded that the sample is predominantly female (74.04%), and it is strongly influenced by the women's colleges. This gender profile should be kept in mind when interpreting the later findings on digital information use patterns, since any gender-based differences in information-seeking behaviour will be drawn mainly from a female-majority group. Awareness was highest for e-theses/dissertations, where 42.0% of respondents were highly aware, followed by consortia-based sources (40.5%) and e-journals/e-books (37.2%). Multimedia resources (34.9%), open access resources (33.3%) and online databases (31.9%) recorded lower levels of high awareness. The table value is 26.30 at 16 degrees of freedom, with $p < 0.001$. This is below 0.05, so the null hypothesis is rejected. There is a statistically significant association between the college and the level of awareness of e-resources

9. Suggestions

1. Library professionals should conduct regular orientation and training programmes on e-resources.
2. College libraries should promote e-resources through websites, e-mail alerts, notice boards and social media.
3. Faculty members should be given easy access to consortium credentials and remote-access facilities.
4. Internet bandwidth and Wi-Fi facilities should be improved.
5. Information literacy workshops should be organised in collaboration with the Department of Collegiate Education and INFLIBNET.

11. Conclusion

E-resources have become essential to teaching, learning and research in higher education, and their value depends on whether faculty know they exist and how to reach them. This study of 782 faculty members from nine government aided arts and science colleges in Thoothukudi District shows that awareness of e-resources is the first step towards their effective use. Libraries and college administrators therefore need to make faculty aware of the resources already available, through regular orientation programmes, hands-on training, information literacy workshops and active promotion of e-resources. Better internet connectivity, easier remote access to consortium resources and stronger support from library professionals will also help. When faculty are well informed and well supported, e-resources are used more fully, which improves teaching quality, research output and the use of institutional investment in digital collections. The findings can guide librarians, college managements and policy makers in planning measures that raise awareness and promote the use of e-resources in government aided colleges.
