### ABSTRACT

A survey was conducted at different herbal drug stores in Uttarakhand, to list plants components of various Ayurvedic formulations being sold. The list contained about 150 medicinal plants. The most notable among them are *Aconitum heterophyllum*, *Acorus calamus*, *Adhatoda zeylanica*, *Asparagus racemosus*, *Aleo barbadensis*, *Andrographis paniculata*, *Boerhavia diffusa*, *Bergenia ligulata*, *Callicarpa macrophylla*, *Cissampelos pareira*, *Eclipta prostrata*, *Evolvulus alsinoides*, *Hedychium spicatum*, *Picrorhiza kurrooa*, *Swertia chirayita*, *Oroxylum indicum*, *Plumbago zeylanica*, *Ricinus communis*, *Sida cordifolia*, *Solanum nigrum*, *Tribulus terrestris*, *Tinospora cordifolia*, *Valeriana jatamansi*, *Vitex negundo*, *Withania somnifera* and *Zanthoxylum armatum*. The listed plants are given complete description viz, taxonomy, habitat, branded drug etc. It is also evident that few herbal plants : *Acorus calamus*, *Aconitum heterophyllum*, *Aegle marmelos*, *Asparagus racemosus*, *Boerhavia diffusa*, *Callicarpa macrophylla*, *Eclipta prostrata*, *Gloriosa superba*, *Hedychium spicatum*, *Oroxylum indicum*, *Picrorhiza kurrooa*, *Plumbago zeylanica*, *Vitex negundo* etc, are regular constituent of several medicines, while *Amaranthus polygonum*, *Cinnamomum zylanicum*, *Coriandrum sativum*, *Solanum nigrum*, *Symplocos racemosa* are used in preparation of specific drugs . The present study assumes significance in selection of herbal plants recommended for cultivation and emphasizes herbal potential of Uttarakhand.

Key words: Ayurvedic formulation, herbal plants, habit, medicinal demand.

### INTRODUCTION

Uttarakhand Government since its inception has projected itself as a herbal state in recognized for its inherited rich biodiversity and ethnic herbal traditions. In view of increasing global popularity of herbal medicinal, cultivation of herbal plants to ensure constant supply can be an important alternate source of economy in the state. Recently the state Government has introduced several incentives for the popularization of cultivation of herbs. However, the various efforts may go fruitless unless a scientific and systematic study is undertaken to support the Government efforts. The choice of right plant selected for cultivation would be a crucial step. The flora of Garhwal has been already extensively explored by several botanists (Gaur1999; Naithani 1984-85; Bawa 1993; Bhatt *et al* 2007). It comprises about 18000 plants species. Further, the perusal of available herbal reports (CIMAP report) revealed that as many as 1784 species are having some medicinal uses. Recommending this seemingly large number of plants would be impracticable and considerable discretion would have to be applied for selecting a herb for cultivation. However, the accumulated literature remains clueless about the selection and preference of economic cultivable herbal plants.

Therefore, it is essential to undertake a study to enlist of various herbal plants actually used in popular herbal medicines being presently marketed to ascertain the medicinal and economic value of individual plants.

In present paper a comprehensive list of medicinal plants is presented in view of their medicinal demand and their availability in Uttarakhand .

MATERIAL AND METHODS

A survey was undertaken of different drug stores selling herbal product in Uttarakhand and comprehensive list of the herbal component of various Ayurvedic drugs was prepared. Each herbal plant, noted as component of particular branded drug prescribed for particular remedy, was given complete taxonomic identification and habit and habitat details by consulting taxonomical literature and flora of the region viz. Flora of the District Garhwal North West

Himalaya ,with ethnobotanical notes,(Gaur1999), Flora of Chamoli (Naithani 1984-85), Flora of Kumaon (Osmaston 1927).Every plant was provided with details such as botanical name, family, vernacular name and habit. Notes were also prepared on the medicinal used plants part and Ayurvedic medicine prepared from them.

RESULT AND DISCUSSION

Observation of different popular herbal prescription drugs have revealed that less than 150

plants are being used in the herbal industry (Dabur, Himalaya, Charak) currently (Tab.1). The summary of detailed results of the survey is presented in the appended table. It follows that plants such as : *Aconitum heterophyllum*, *Acorus calamus*, *Adhatoda zeylanica*, *Asparagus racemosus*, *Aleo barbadensis*, *Andrographis paniculata*, *Boerhavia diffusa*, *Bergenia ligulata*, *Callicarpa macrophylla*, *Cissampelos pareira*, *Eclipta prostrata*, *Evolvulus alsinoides*, *Hedychium spicatum*, *Picrorhiza kurrooa*, *Swertia chirayita*, *Oroxylum indicum*, *Plumbago zeylanica*, *Ricinus communis*, *Sida cordifolia*, *Solanum nigrum*, *Tribulus terrestris*, *Tinospora cordifolia*, *Valeriana jatamansi*, *Vitex negundo*, *Withania somnifera* *Zanthoxylum armatum* etc, some of the plants being used as herbal medicine. Among the listed plant being used, about 28% are tree, 22% are shrub, 45% are herb and rest 7 % are climber (Fig.1). These plants have utility in treating ailments ranging from fever, dysentery, carminative, asthma, epilepsy, bronchial, skin disease, diarrhea, aphrodisiac, constipation, ulcer, eczema, jaundice, kidney stone, rheumatic pain, urinary troubles, mental disorder, bronchial cough, hepatitis, piles, diabetes and cancer. The plants such as: *Aconitum heterophyllum*, *Centella asiatica*, *Hedychium spicatum*, *Picrorhiza kurrooa*, *Sapindus mukorossi*, *Swertia chirayita*, *Taxus baccata*, *Valeriana jatamansi* etc, appear vary high in demand in drug industry as they are being used in largest number of the preparations. In case of high altitude plant, Uttarakhand have exclusive and unique position, as it is a natural habitat for all high altitude plant resources. It could be capitalized for economic benefit of the state.

The present findings will prove to be benchmark in shaping and formulating the policies

on herb based trade and commerce. In the face of rich repository of the biodiversity, the state of Uttarakhand can make its place in herbal trade and earn substantial economy. Out of the most marketable herbs, a sizable number are either native to Uttarakhand or can be successfully introduce in the state. However, to preserve the biodiversity, the promotion of herbal exploitation will have to be paralleled with the systematic introduction of herbal cultivation at large scale, which will avoid over indiscriminate exploitation and ensure constant and authentic supply. The result of the above study will decidedly guide the herbal trade and related activity in the state.
